

API quickstart

Zanista

You will receive your API key over a separate channel. The other values are the same for every contestant.

Credentials

Set these in your environment. Never commit them.

```
AZURE_OPENAI_API_KEY=<sent to you separately>
AZURE_OPENAI_ENDPOINT=https://zanistagpteastus2.openai.azure.com/
AZURE_OPENAI_DEPLOYMENT=gpt-5.4-mini
AZURE_OPENAI_API_VERSION=2024-12-01-preview
```

Model: **gpt-5.4-mini** — multimodal, accepts text and images. Use that exact deployment name.

Python

```
import os
from openai import AzureOpenAI

client = AzureOpenAI(
    api_version=os.environ["AZURE_OPENAI_API_VERSION"],
    azure_endpoint=os.environ["AZURE_OPENAI_ENDPOINT"],
    api_key=os.environ["AZURE_OPENAI_API_KEY"],
)

response = client.chat.completions.create(
    model=os.environ["AZURE_OPENAI_DEPLOYMENT"],
    messages=[{"role": "user", "content": "Reply with OK."}],
    max_completion_tokens=64,
)
print(response.choices[0].message.content)
```

curl

```
curl -s "$AZURE_OPENAI_ENDPOINT/openai/deployments/$AZURE_OPENAI_DEPLOYMENT/chat/completions?api-version=$AZURE_OPENAI_API_VERSION" \
  -H "api-key: $AZURE_OPENAI_API_KEY" -H "Content-Type: application/json" \
  -d '{"messages":[{"role":"user","content":"Reply with OK."}], "max_completion_tokens":64}'
```

One rule

Use **only** the deployment named `gpt-5.4-mini`. The key reaches other deployments on the resource — calling any of them is an automatic rejection. We audit usage.
